

What is a domino?

A domino is a small flat rectangular block made of wood or plastic that has one or more dots on one side and that is used in playing games.

INSTRUCTIONS:

Step 1: Look for Carmen Haakstad's large *Domino I – 6* forest installation in the *Meet the Artist* video. *Can you find the person he integrated into one of his Domino Tree Paintings? Did you already notice that there are often figures present in his forest paintings?*

Step 2: Take the large curvy wooden stick out of your kit. Notice that it has a little bit of a grain to it.

Step 3: Using the materials provided the way they make sense to you, choose your first plasticine colour and flatten the plasticine before you build up the sculptural form of a domino. The **curvy stick** can be used as a **tool to flatten the plasticine** or **serve as a support** for building the form of a domino. Also, notice that there is kind of a **mini rolling pin** included in your kit which can also be used to **flatten the plasticine**, **carve into it** and/or **press the raffia and tissue papers into the plasticine**.
